(54) DATA REPRODUCING DEVICE, DATA RECORDING DEVICE, DATA REPRODUCING METHOD, DATA RECORDING METHOD, AND PROGRAM OFFERING MEDIUM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a data processing device effectively utilizing a revocation list having identifiers of different kinds for a plurality of mediums and contents. SOLUTION: The revocation list is set up on a memory interface, and it is made continuously utilizable when the mediums are mounted and when the contents are reproduced after the setup. Since the list is made continuously utilizable when the mediums are mounted and when the contents are reproduced after the list is set up on the memory interface, the reading process of the list from a memory each time the contents are utilized is not

required, and processing efficiency is improved. Medium IDs and content IDs are stored on the list, and a plurality of contents and mediums can be excluded based on the list once set up on the memory interface.
